# IBM Cognitive Enterprise Business Platform for Oracle Cloud

Oracle Fusion Cloud Enterprise Resource Planning (ERP) for Telecommunications

The telecommunications industry continues to face many competitive pressures, from meeting increasingly complex and sophisticated customer demands, to delivering operational efficiencies or the cost of investment and developing new products and services. Ensuring the business delivers on these strategic objectives is critical to helping it achieve its ambitions.

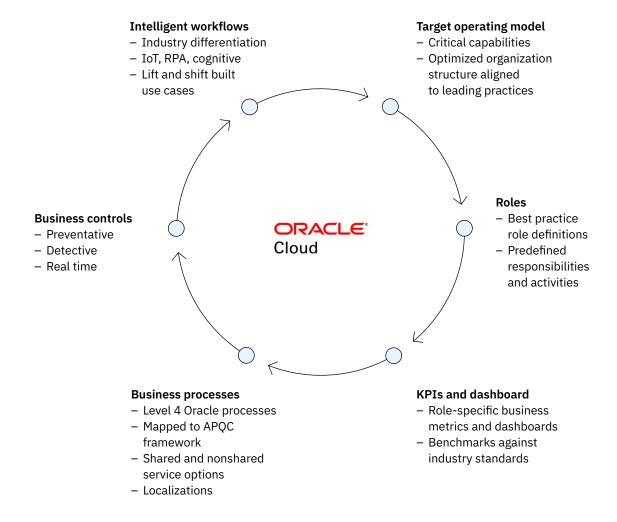

CXOs and finance and operations teams play a critical role in helping the business rise to the challenge.

To help telecommunications businesses with their finance and operational goals, IBM has developed a next-generation business model.

IBM offers a business platform, centered around Oracle Cloud Applications, configured to maximize business performance.

IBM can deliver your optimal target state, validated against your requirements, from day one through a ready off-the-shelf model that's fully working and enhanced for Oracle Cloud Applications.

The business platform provides a solution tailored to your industry based around a blueprint focused on delivering a best-in-class target operating model (TOM) with critical business capabilities honed to deliver the most value.

# Delivered through a telecommunications-optimized architecture

The business platform is preconfigured and aligned to telecommunications industry-specific architectures. For telecommunications organizations, the solution and processes incorporate key industry-specific considerations, such as the critical need to maintain and monitor infrastructure alongside the launch of new products and services.

The platform also addresses how broader telecommunications flows, such as the sales and receipts from end customers, move from front-office to back-office systems in Oracle Cloud Applications.

IBM can deliver your optimal target state, validated against your requirements, from day one with a lift-and-shift model that's fully working and optimized for Oracle Cloud Applications.

Enhanced to align with industry-specific opportunities and challenges

The platform isn't only designed to align with common industry applications, but also recognizes that each industry faces its own distinct challenges and its own strategic objectives. CXOs, alongside finance and operational teams have multiple "levers" they can pull to help the business deliver against its aims.

Those "levers" or drivers of change—whether they be aligned with improving business performance or addressing key pain points—can be aligned with the critical imperatives of that organization and industry.

Industry solutions delivered through emerging technologies

The platform is a unique solution—it delivers more through IBM's proprietary intelligent workflows and industry-built solutions. Across your business processes, emerging technologies like artificial intelligence (AI) and robotic process automation (RPA) are seamlessly integrated into the standard Oracle Cloud Applications alongside IBM's industry-differentiating Oracle PaaS-enabled and SaaS-enabled solutions.

The following diagrams depict, by each business driver, the percentage of the related processes that are delivered through and then improved on by these capabilities. They help deliver greater efficiency, improving employee experience and achieving greater compliance and business insight.

| Strategic aims   | <b>Business Drivers</b>                      | IBM Cognitive Enterprise  | Outcomes   |
|--|--|---|--|
